I am a Staff Software Engineer at [Uber AI](#); working on next-generation ML initiatives to provide insight into realtime and offline systems. I am a strong supporter of open source software, and an active contributor on [Github](#).

Prior to Uber, I was a Staff engineer at [Jawbone](#), a pioneer health wearable company, where I oversaw the collection, persistence and management of millions of personal health records.

I was also the principal iOS engineer at [Getaround](#), a peer-to-peer car sharing service, where I drove the mobile roadmap from ideation to a full production release. To date, I've delivered more than 15 unique iOS applications to the Apple App Store, across a wide spectrum of industries ranging from healthcare, gaming, transportation and the sharing economy.

## Education
